

Internship

Assistant materials engineer

FERONYL, based in Mouscron since 1950, is specialised in injection moulding and manufacturing polymer & composite components for the civil engineering, defence, aerospace and medical sectors

Task

- Preparation of ceramic and metallic materials
- Compression and injection moulding
- Debinding and sintering tests
- Characterisation
- Test documentation

Skills required

- M1 or M2 students specialising in physical chemistry or materials science/engineering
- Knowledge of ceramic, metallic and/or polymeric materials
- Material properties and characterisation
- Interest in laboratory work
- Organised, rigorous, independent

Why choose us?

- Working on next-generation products for the aerospace and defence industries using cutting-edge equipment
- Exciting and stimulating projects
- Pleasant environment
